

U.S. Nuclear Waste Technical Review Board

Fiscal Year (FY) 2008 Budget Request Submittal

**Including Performance Evaluation for FY 2006
and Supplementary Information about the Board**

Summary and Highlights

The U.S. Nuclear Waste Technical Review Board's performance-based budget request for fiscal year (FY) 2008 will support Board activities related to achieving its performance goals for the year. The Board's general goals, strategic objectives, and annual performance goals are listed in the budget document and have been established in accordance with the Board's congressional mandate to conduct an independent evaluation of the technical and scientific validity of U.S. Department of Energy (DOE) activities related to disposing of commercial spent nuclear fuel and defense high-level radioactive waste. Such activities include developing performance estimates for, designing, and potentially constructing a repository at Yucca Mountain in Nevada. The Board also is mandated to review DOE activities related to packaging and transporting the waste to the proposed repository site. The Board's ongoing peer review is vital to the credibility of DOE's technical and scientific activities.

In FY 2007, the Board organized its review of DOE activities into three technical areas: *preclosure operations*, including surface-facility design and operations and the transport of spent nuclear fuel and high-level radioactive waste from nuclear utility reactors or storage facilities to the repository site; *postclosure* repository performance issues, including the nature of the source term and the movement of the radionuclides most significant to dose through the engineered and natural barriers; and the *integration* of science and engineering and preclosure and postclosure activities, including the effects of temperatures on repository performance and the effects of waste package designs on the temperatures in the repository.

The Board's strategic goals and objectives have been organized around these three technical areas and the Board's panels have been realigned to help facilitate and focus the Board's review. In addition, the Board's performance goals for FY 2008 have been updated to reflect the reorganization of the Board's approach to evaluation and expected DOE activities during the period. For example, the Board will review DOE activities related to developing realistic models of repository performance; determining the source term—the release of dose-contributing radionuclides as a function of time from the engineered-barrier system; implementing the transportation, aging, and disposal (TAD) program; analyzing the potential for localized corrosion of waste packages; and developing a technically-based and integrated thermal management strategy. The Board is requesting \$3,621,000 to support its comprehensive technical review in FY 2008.

U.S. Nuclear Waste Technical Review Board

Salaries and Expenses

(Including Transfer of Funds)

For necessary expenses of the Nuclear Waste Technical Review Board, as authorized by Public Law 100-203, section 5051, \$3,621,000 to be transferred from the Nuclear Waste Fund and to remain available until expended.

Note. — The regular FY 2007 appropriation for this account had not been enacted at the time the budget was prepared; therefore, this account is operating under a Continuing Resolution (P.L. 109-289, Division B, as amended). The amounts included for FY 2007 in this budget reflect the levels provided by the Continuing Resolution.

(2006 Energy and Water Development Appropriations Act, P.L. 109-103)

Board Performance-Based Budget Request for FY 2008

Background

Approximately 2,000 metric tons of spent nuclear fuel are produced each year by nuclear reactors and are stored at more than 70 sites nationwide. By the time the presently operating reactors reach the end of their scheduled 40-year lifetimes (at some time in the 2030's), approximately 87,000 metric tons of spent fuel will have been produced. (This estimate does not include spent nuclear fuel from plants that may be granted license renewals by the NRC.) In addition, high-level radioactive waste (HLW) from defense activities has been stored at numerous federal facilities throughout the country. Disposal of the spent nuclear fuel and HLW in a deep geologic repository is the primary approach being pursued by the United States and other countries.

In early 2002, the Secretary of Energy recommended approval of the Yucca Mountain site to the President. The President then recommended the site to Congress. The State of Nevada later disapproved the recommendation. Later that same year, both the U.S. House of Representatives and the U.S. Senate formally approved the site recommendation. Since that time, DOE has focused on preparing an application to be submitted to NRC for authorization to construct a repository at the Yucca Mountain site. Throughout this process, the Board has evaluated the technical basis of DOE's work and communicated Board views to Congress and the Secretary of Energy in letters, reports, and congressional testimony.

The Board's Continuing Role

The Board was established by Congress in the Nuclear Waste Policy Amendments Act (NWPAA) of 1987. The Board is charged with evaluating the technical and scientific validity of activities undertaken by the Secretary of Energy, including site-characterization activities and activities related to the packaging and transportation of HLW and spent nuclear fuel.* Board technical and scientific findings and recommendations are included in reports that are submitted at least twice each year to Congress and the Secretary. In creating the Board, Congress realized that an ongoing independent and expert evaluation of the technical and scientific validity of DOE's site-evaluation and other waste-management activities would be crucial to acceptance by the public and the scientific community of any approach for disposing of spent nuclear fuel and HLW.

* 42 U.S.C. 10263

Board Funding Requirement for FY 2008: \$3,621,000

The Board's budget request of \$3,621,000 for FY 2008 represents the funding needed to accomplish the Board's performance goals for the year. During FY 2008, the Board will continue to review DOE activities, including those related to developing realistic models of repository performance; determining the source term—the release of dose-contributing radionuclides as a function of time from the engineered-barrier system; implementing the transportation, aging, and disposal (TAD) concept; analyzing the potential for localized corrosion of waste packages; and developing a technically-based and integrated thermal management strategy. The amount requested will support the work of the Board members who will conduct the comprehensive review described above and enable the Board to comply with extensive federal security requirements related to the Board's information systems.

Board General Goals and Strategic Objectives for FY 2007-2012

The Board's general goals and strategic objectives were revised in its strategic plan for FY 2007-2012. They have been established in accordance with the Board's statutory mandate and with anticipated DOE activities during the five-year period.

General Goals

The Board's general goals for FY 2007-2012 reflect the importance of gaining a realistic understanding of the potential performance of the proposed repository and the interdependence and interactions of all elements of the nuclear waste management system.

The following are the Board's general goals for FY 2007-2012.

1. Evaluate the technical and scientific validity of activities undertaken by DOE related to preclosure operations.
2. Evaluate the technical and scientific validity of activities undertaken by DOE related to postclosure repository performance.
3. Evaluate the technical and scientific validity of activities undertaken by DOE related to integrating science and engineering and cross-cutting preclosure and postclosure issues.

Strategic Objectives

To achieve its general goals, the Board has established the following 5-year objectives.

1. *Objectives Related to the Preclosure Period*

- 1.1 Evaluate the technical and scientific validity of DOE efforts to implement its TAD canister concept.
- 1.2 Evaluate DOE efforts to design and construct surface facilities and infrastructure at the proposed repository site.
- 1.3 Review DOE efforts to develop a plan for transporting waste from reactor or federal storage sites to the proposed repository.

2. Objectives Related to the Postclosure Period

- 2.1 Evaluate DOE studies and analyses related to determining the source term—the release of dose-contributing radionuclides as a function of time from the engineered-barrier system.
- 2.2 Encourage DOE to develop realistic performance models and review the technical and scientific validity of DOE efforts to gain a more realistic understanding of potential repository performance.
- 2.3 Evaluate the technical and scientific validity of DOE data and analyses related to infiltration, flow and transport through the natural system, and seepage into drifts.
- 2.4 Assess DOE efforts to increase understanding of repository tunnel environments and the potential of localized corrosion of waste packages in the proposed repository.
- 2.5 Review DOE activities related to predicting the potential effect on dose of disruptive events.

3. Objectives Related to System Integration

- 3.1 Evaluate DOE efforts to develop thermal criteria for the repository and a strategy for managing the effects of heat on preclosure operations and postclosure repository performance.
- 3.2 Evaluate the integration of science and engineering in DOE's program, especially the integration of new data into repository and waste-package designs.
- 3.3 Review DOE integration of operational and performance models.
- 3.4 Review DOE analysis and integration of issues and designs related to receipt, processing, aging, and emplacement of spent nuclear fuel and high-level radioactive waste (e.g., TAD and Yucca Mountain surface facilities).

Board Performance Goals for FY 2008

The Board's performance goals for FY 2008 have been established in accordance with its general goals and strategic objectives. The Board's performance-based budget for FY 2008 has been developed to enable the Board to meet its performance goals for the year.

The Board will accomplish its goals by doing the following:

- Holding up to three public meetings with DOE and DOE contractor personnel involving the full Board and holding meetings of the Board panels and technical workshops, as needed.
- When appropriate, holding fact-finding sessions involving small groups of Board members who will focus in depth on specific technical topics.
- Reviewing critical documents provided by DOE and its contractors, including TSPA, preclosure safety analyses (PCSA), contractor reports, analysis and modeling reports (AMR), and design drawings and specifications.
- When appropriate, visiting and observing ongoing investigations, including those conducted at the national laboratories or potential analog sites.
- On occasion, visiting programs in other countries and attending national and international symposia and conferences.

The Board's performance goals for FY 2008, which are described below, are divided into three technical areas that correlate with the Board's recently reorganized panel structure. The numbered goals also correspond with the Board's strategic objectives. Funding allocations for fiscal years 2006, 2007, and 2008 are indicated for each set of performance goals.

1. *Performance Goals Related to Preclosure Operations*

(Dollars in Thousands)

<i>FY 06</i>	<i>FY 07</i>	<i>FY 08</i>
<i>898</i>	<i>917</i>	<i>905</i>

- 1.1.1. Review DOE analyses of facilities, systems, and component designs related to implementation of the TAD.
- 1.1.2 Review DOE procedures for ensuring that waste accepted for disposal has been suitably characterized.
- 1.2.1 Evaluate the design of surface facilities, including the fuel handling and aging facilities, and how the design affects and is affected by the thermal management of the repository.

- 1.3.1 Evaluate DOE's analysis of the comparative risks of alternative transportation modes and routes.
- 1.3.2. Review DOE efforts to develop criteria for routing decisions.
- 1.3.3 Evaluate logistics capabilities of the transportation system.
- 1.3.4. Evaluate DOE plans for enhancing safety capabilities along transportation corridors, review DOE planning and coordination activities, accident prevention activities, and emergency response activities.

2. Performance Goals Related to Postclosure Repository Performance

	(Dollars in Thousands)		
	<i>FY 06</i>	<i>FY 07</i>	<i>FY 08</i>
	<i>1,796</i>	<i>1,835</i>	<i>1,811</i>

- 2.1.1. Evaluate DOE efforts to analyze the source term and to estimate the length of time it will take for radionuclides to be mobilized and transported through the natural system.
- 2.1.2. Evaluate activities undertaken by DOE to develop a risk profile for specific radionuclides.
- 2.2.1. Review updates of Total System Performance Assessment (TSPA) models; identify models and data that should be updated.
- 2.2.2. Review plans and work carried out on possible analogs for the natural components of the repository system.
- 2.2.3. Evaluate results of studies undertaken by the science and technology program related to reducing uncertainties about the performance of the natural and engineered components of the repository.
- 2.2.4. Evaluate information from the science and technology program on secondary mineral phases and neptunium and plutonium mobilization.
- 2.2.5. Review DOE efforts to develop and articulate a repository safety case.
- 2.3.1. Monitor the results of flow-and-transport studies to obtain information on the potential performance of the saturated zone as a natural barrier in the repository system.
- 2.3.2. Review new infiltration work undertaken in response to questions about QA procedures used to obtain previous infiltration estimates.
- 2.4.1. Evaluate data from studies of the effects of corrosion and the waste package environment on the predicted performance of materials being proposed for engineered barriers.

- 2.4.2. Review thermal-mechanical and rock-stability testing on potential conditions in repository tunnels.
- 2.5.1. Review DOE efforts in addressing questions related to possible seismic and igneous events and consequences.

3. *Performance Goals Related to System Integration.*

(Dollars in Thousands)		
<i>FY 06</i>	<i>FY 07</i>	<i>FY 08</i>
<i>897</i>	<i>918</i>	<i>905</i>

- 3.1.1. Evaluate the accuracy and completeness of the technical bases for repository and waste package designs.
- 3.1.2. Evaluate the integration of subsurface and repository designs, layout, and operational plans into an overall thermal management strategy.
- 3.2.1. Assess the integration of scientific studies into engineering designs for the repository and the waste package.
- 3.2.2. Review DOE efforts in integrating results of scientific studies related to the behavior of the natural system into repository designs.
- 3.2.3. Evaluate the integration of the repository facility, including the surface and subsurface components.
- 3.3.1. Review the potential and limits of the Total System Model (TSM).
- 3.4.1. Review DOE analyses and integration of designs for facilities, systems, and repository components, including TAD.
- 3.4.2. Evaluate DOE efforts to assess and integrate information on surface facilities and infrastructure at nuclear utility reactor sites.

FY 2008 Budget Request by Object Class

Object Class 11.1, Full-Time Staff: \$1,810,000

The amount requested for full-time permanent staff is based on the requirement to fund 15 total positions. Because the Board's technical and scientific evaluations are conducted by Board members supported by professional staff, the Board's enabling legislation authorizes the Board chairman to appoint and fix the compensation of not more than 10 senior professional staff members. This request assumes the use of all 10 positions under this authority. In addition, the chair is authorized to appoint such clerical and administrative staff as may be necessary to discharge the responsibilities of the Board. The other 5 positions funded under this object class are support staff engaged in clerical, secretarial, and administrative activities; development and dissemination of Board publications; information technology, including maintenance of the Board's Web site; public affairs; financial and meeting logistics for the Board. The small administrative staff supports the very active part-time Board members and full-time professional staff.

The estimate assumes a 1.031 percent combined cost-of-living adjustment and locality raise in January 2008 for both General Schedule and Executive Schedule employees.

Object Class 11.3, Other than Full-Time Permanent Staff: \$361,000

The amount requested for this category includes compensation for Board members. Each Board member will be compensated at the rate of pay for Level III of the Executive Schedule for each day that the member is engaged in work for the Board. The 11 Board members serve on a part-time basis equaling 2 full-time equivalent positions. The budget assumes that each member will attend 3 full Board meetings, 1 panel meeting, and an average of 3 additional meetings or field trips during the year. This estimate represents an average of 54 workdays per member in FY 2008. This estimate also assumes a 1.031 percent increase in Executive Schedule compensation for employees in this category for FY 2008 (effective January 2008).

Object Class 11.5, Other Personnel Compensation: \$36,000

The amount requested for this category covers performance awards under the Performance Management System approved by the Office of Personnel Management (OPM).

Object Class 12.1, Civilian Personnel Benefits: \$468,000

The estimate for this category represents the government's contribution for employee benefits at the rate of 25.6 percent for staff and 7.65 percent for members.

Object Class 21.0, Travel: \$283,000

The amount requested for this object class includes travel costs for Board members, staff, and consultants traveling to Board and panel meetings, to other meetings (including professional meetings, conferences, and orientation activities) and sites to acquire technical and scientific data, and to Yucca Mountain in Nevada to review site activities within the scope of the Board's mission. The request is based on 11 Board members attending 3 Board and 1 panel meeting and making an average of 3 other trips during the year at an average length of 3 days each, including travel time. In addition, the 10 professional staff members will travel on similar activities an average of 9 trips during the year at an average of 3 days per trip. In FY 2008, the expectation is that DOE may increase its activities related to planning for transportation and packaging of the waste and designing the repository surface and subsurface facilities. The Board's meetings will increase commensurately and will be held in parts of the country affected by DOE action.

Object Class 23.1, Rental Payments to the General Services Administration (GSA): \$202,000

The estimate for this object class represents the amount that the Board will pay to the GSA for 6,288 square feet of office space.

Object Class 23.3, Communications, Utilities, Miscellaneous: \$21,000

The requested amount represents estimates for telephone service, postage, local courier, video teleconferencing, FTS long-distance telephone service, the Internet, and mailing services related to management and use of the Board's mailing list.

Object Class 24.0, Printing and Reproduction: \$17,000

The major items in this object class are the publication of reports to the U.S. Congress and the Secretary of Energy, publication of meeting notices in the *Federal Register*, production of press releases announcing meetings and report publication, and production of other informational materials for Board members and the public. All Board meetings are open to the public, and copies of meeting materials are provided at the meetings. Members of the public who live in rural areas and who do not have Web access receive the Board's material upon request.

Object Class 25.1, Consulting Services: \$41,000

Consultants will be hired to support and supplement Board and staff analysis of specific technical and scientific issues. This will enable the Board to conduct the kind of comprehensive technical and scientific review mandated by Congress.

Object Class 25.2, Other Services: \$145,000

This category includes court-reporting services for an estimated four Board or panel meetings, meeting-room rental and related services, maintenance agreements for equipment, professional development, and services from commercial sources. In addition, the Board will contract with part-time technical consultants to supplement and support in-house operations in systems management, Web site management, report production, and editing. Costs of a financial audit to comply with the Accountability of Tax Dollars Act also are included in this category.

Object Class 25.3, Services from Other Government Agencies: \$100,000

This category includes GSA administrative support services (payroll, accounting, personnel, etc.), legal advice from GSA, security clearances through OPM, and other miscellaneous interagency agreements.

Object Class 26.0, Supplies and Materials: \$54,000

Anticipated expenses include routine office supplies, subscriptions and library materials, and off-the-shelf technical reports and studies.

Object Class 31.0, Equipment: \$83,000

This estimate is for miscellaneous equipment costs, including computer hardware, and computer-network software maintenance. In addition, funds are included to support the Federal Information Security Act, which requires federal agencies to periodically test and evaluate the effectiveness of their information security policies, procedures, and practices. The category also includes continued upgrades to IT security and continuity of operations (COOP) availability, support to E-Gov telecommuting efforts, and technical support of the management of electronic records and e-mails.

U.S. Nuclear Waste Technical Review Board Performance Evaluation Fiscal Year 2006

The Nuclear Waste Policy Amendments Act of 1987 directed the U.S. Department of Energy (DOE) to characterize one site at Yucca Mountain in Nevada to determine its suitability as the location of a permanent repository for disposing of commercial spent nuclear fuel and defense high-level radioactive waste. The Act also established the U.S. Nuclear Waste Technical Review Board as an independent agency within the executive branch of the United States Government. The Act directs the Board to evaluate continually the technical and scientific validity of activities undertaken by the Secretary of Energy related to disposing of, transporting, and packaging the waste and to report its findings and recommendations to Congress and the Secretary of Energy at least twice yearly. The Board only can make recommendations; it cannot compel DOE to comply. The Board strives to provide Congress and the Secretary of Energy with completely independent, credible, and timely technical and scientific program evaluations and recommendations achieved through peer review of the highest quality.

Board Performance Criteria and Method of Evaluation

The Board believes that measuring its effectiveness by directly correlating Board recommendations with improvements in the technical and scientific validity of DOE activities would be ideal. However, the Board cannot compel DOE to comply with its recommendations. Consequently, a judgment about whether a specific recommendation had a positive outcome as defined above may be (1) subjective or (2) an imprecise indicator of Board performance because implementation of Board recommendations is outside the Board's direct control. Therefore, the Board has developed the following criteria to measure its annual performance in achieving individual performance goals.

1. Did the Board undertake the reviews, analyses, or other activities needed to evaluate the technical and scientific validity of DOE activity identified in the performance goal?
2. Were the results of the Board's evaluation communicated in a timely, understandable, and appropriate way to Congress, the Secretary of Energy, the Office of Civilian Radioactive Waste Management (OCRWM), or the public?

If both measures are met in relation to a specific goal, the Board's performance in meeting that goal will be judged effective. If only one measure is met, the performance of the Board in achieving that goal will be judged minimally effective. Failing to meet both performance measures without sufficient and compelling explanation will result in a judgment that the Board has been ineffective in achieving that performance goal. If the goals are deferred or outdated, it will be noted in the evaluation.

The Board uses its annual performance evaluations, together with its assessment of current or potential key technical issues of concern related to DOE program, to develop its annual performance objectives and to inform spending allocations in its performance-based budget for subsequent years. The Board's evaluation of its success in achieving its performance goals for FY 2006 will be submitted to the Office of Management and Budget (OMB), attached to the Board's budget request to Congress for FY 2008, included in the Board's summary report for 2006, and posted on the Board's Web site (www.nwtrb.gov).

Performance Evaluation for FY 2006

The Board accomplishes its goals by doing some or all of the following:

- Holding up to three public meetings with DOE and DOE contractor personnel involving the full Board and holding meetings of the Board panels, as needed.
- When appropriate, holding fact-finding sessions involving small groups of Board members who will focus in depth on specific technical topics.
- Reviewing critical technical documents provided by DOE and its contractors, including TSPA, preclosure safety analyses (PCSA), contractor reports, analysis and modeling reports (AMR), and design drawings and specifications.
- When appropriate, visiting and observing ongoing technical and scientific investigations, including those conducted at the national laboratories or potential analog sites.
- Visiting programs in other countries and attending national and international symposia and conferences.

The Board's performance goals for FY 2006 that are listed below are divided into four topical areas that correspond to the Board's panel structure as it was organized in FY 2006. The numbering of the performance goals also correlates with the Board's general goals and strategic objectives set forth in its strategic plan for FY 2004-2009. Each performance goal is followed by a bullet that contains an evaluation of the Board's performance in achieving the performance goal and an explanation of the basis for the evaluation.

The reliability and completeness of the performance data used to evaluate the Board's performance relative to its annual performance goals are high and can be verified by accessing the referenced documents on the Board's Web site.

1. Performance Goals and Evaluation Related to the Natural System

1.1.1. Review the technical activities and plans for DOE's science and technology (S&T) program.

- ***Evaluation of 1.1.1: Effective.*** The Board commented on the importance of work undertaken by the S&T program in its December 19, 2005, letter to OCRWM acting director, Paul Golan. In the Board's December 30, 2005, letter report to Congress and the Secretary, the Board recommended that DOE integrate corrosion data from work undertaken by the S&T program into repository performance estimates. In the same report, the Board signaled its intention to review S&T work related to an enhanced technical basis for predictions of the behavior of water in the repository environment. Board Chairman John Garrick encouraged the continuation of S&T work on the source term in testimony before the Senate Energy and Natural Resources Committee on May 16, 2006.

1.1.2. Monitor the results of flow-and-transport studies to obtain information on the potential performance of the saturated zone as a natural barrier in the repository system.

- ***Evaluation of 1.1.2: Effective.*** The Board expressed concern to DOE about chlorine-36 studies that affect the technical basis for predictions of water flow in its December 19, 2005, letter to Paul Golan, acting director of OCRWM. The Board reiterated the concern in its letter report to Congress and the Secretary dated December 30, 2005. The issues of water flow and radionuclide transport were discussed at the Board's February 1, 2006, meeting. In testimony before the Senate Energy and Natural Resources Committee on May 16, 2006, Dr. Garrick reported that the Board believes that DOE has made progress in obtaining information on groundwater flow in the unsaturated and saturated zones under ambient temperature conditions. However, Chairman Garrick pointed out that the Board continues to believe that additional information is needed on secondary minerals and on colloid-facilitated radionuclide transport. The Board commented extensively on these issues in its June 2006 report to Congress and the Secretary.

1.1.3. Review DOE efforts to confirm estimates of natural-system performance, including tests of models and assumptions, and the pursuit of independent lines of evidence.

- ***Evaluation of 1.1.3: Effective.*** The Board received a science update at its meeting on November 8, 2005, and commented on a number of issues in a follow-up letter to OCRWM acting director Paul Golan on December 19, 2005, including the conclusion of large-scale tests, work at the Piña Blanca analog site, and the need to develop a realistic analysis of potential repository performance in parallel with a compliance case. In its December 30, 2005, letter report to Congress and the Secretary, the Board commented on the importance of determining the nature of the source term for predications of repository performance, raised questions about the "multi-scale" water flow model; and reiterated the need for a realistic analysis of repository performance. These issues were discussed at the Board's February 1, 2006, meeting, and in a March 6, 2006, letter to Paul Golan following the meeting. They also were touched on in Dr. Garrick's May 16, 2006, testimony before the Senate Energy and Natural Resources Committee and in Board answers to follow-up questions from members of the Committee after the hearing. The issues were discussed extensively in the Board's June 2006 report to Congress and the Secretary.

1.2.1. Review DOE efforts to resolve questions related to possible seismic events and

igneous consequences.

- ***Evaluation of 1.2.1: Ineffective.*** The Board did not review or comment on DOE's work in this area during the period covered by the evaluation.

1.3.1. Evaluate geologic, hydrologic, and geochemical information obtained from the enhanced characterization of the repository block (ECRB) at Yucca Mountain.

- ***Evaluation of 1.3.1: Effective.*** The Board commented on the conclusion of a number of major tests, including those conducted behind the bulkhead in the ECRB, in its letter to OCRWM acting director Paul Golan dated December 19, 2005. The Board recommended that DOE complete and fully assess post-test characterization. The Board reiterated its comments in a report to Congress and the Secretary of Energy on December 30, 2005.

1.3.2. Evaluate data from the drift-scale heater test.

- ***Evaluation of 1.3.2.: Effective.*** The Board commented on the conclusion of a number of major tests, including the drift-scale heater test in its letter to OCRWM acting director Paul Golan on December 19, 2005. The Board recommended that DOE complete and fully assess post-test characterization data and use the information to supplement understanding of thermal-chemical-hydrologic effects. The Board reiterated its comments in a report to Congress and the Secretary of Energy on December 30, 2005.

1.3.3. Review plans and work carried out on possible analogs for the natural components of the repository system.

- ***Evaluation of 1.3.3: Effective.*** The Board commented on DOE's efforts to assess natural analogs in its letter to Paul Golan dated December 19, 2005; in its December 30, 2005, report to Congress and the Secretary; and in its June 2006 report to Congress and the Secretary.

1.3.4. Recommend additional work needed to address uncertainties, paying particular attention to estimates of the rate and distribution of water seepage into the repository under proposed repository design conditions.

- ***Evaluation of 1.3.4: Effective.*** In a December 19, 2005, letter to Paul Golan, OCRWM acting director, the Board recommended testing in the unsaturated and saturated zones and a continuation of analog-site studies on the potential performance of natural barriers; testing on secondary minerals and colloid-facilitated radionuclide transport; and a resolution of discrepancies among chlorine-36 studies. Those recommendations were reiterated in the Board's December 30, 2005, letter report to Congress and the Secretary. The topic of water seepage into repository drifts was discussed at the Board's February 1, 2006, meeting. In its follow-up letter to OCRWM acting director Paul Golan, dated March 6, 2006, the Board recommended continuation of studies relating to the source term. Chairman Garrick commented on the need for more information on the source term in testimony before the Senate Energy and Natural Resources Committee on May 16, 2006. The Board also stated its recommendations in its report to Congress and the Secretary of Energy released in June

2006.

1.4.1. Evaluate tunnel-stability studies undertaken by DOE.

- *Evaluation of 1.4.1: Deferred.* The Board did not review DOE efforts in this area but signaled its intention to do so in the future in its letter to Congress and the Secretary dated December 30, 2005.

1.5.1. Review DOE's efforts to integrate results of scientific studies on the behavior of the natural system into repository designs.

- *Evaluation of 1.5.1: Effective.* In a letter dated December 19, 2005, to Paul Golan, OCRWM acting director, the Board urged DOE to determine the factors that will affect drip-shield performance and incorporate them into designs and operational plans. The Board recommended that the implications of thermal constraints be considered in designing elements of the waste management system, including the waste package and repository surface and subsurface facilities in its December 30, 2005, letter report to Congress and the Secretary. In the same letter and report, the Board noted the importance of assessing the results of recently concluded tests that may increase understanding of how the natural barrier will affect the performance of the engineered barriers. Chairman Garrick mentioned the importance of considering the system-wide implications of DOE's thermal-management strategy in testimony before the Senate Energy and Natural Resources Committee on May 16, 2006. These issues also were discussed at-length in the Board's June 2006 report to Congress and the Secretary.

2. Performance Goals and Evaluation Related to the Engineered System

2.1.1. Monitor DOE's performance-allocation studies.

- *Evaluation of 2.1.1: Eliminated.* DOE did not undertake such work in the time-frame being evaluated. There is no indication that such work will be undertaken in the future.

2.2.1. Review thermal testing and rock stability testing related to potential conditions in repository tunnels.

- *Evaluation of 2.2.1: Effective.* In its December 19, 2005, letter to Paul Golan, OCRWM acting director, and in its December 30, 2005, letter report to Congress and the Secretary, the Board commented on the need to obtain additional data on thermal conductivity of repository rocks.

2.2.2. Evaluate data from studies of the effects of corrosion and the waste package environment on the predicted performance of materials being proposed for engineered barriers.

- *Evaluation of 2.2.2: Effective.* DOE presented information on corrosion testing at the Board's November 8, 2005, meeting. The Board commented in a December 19, 2005,

follow-up letter to OCRWM acting director Paul Golan that the Board has continuing concerns about DOE's technical basis for screening out localized corrosion from Total System Performance Assessment for license application (TSPA-LA). The Board reiterated the concern in its letter report to Congress and the Secretary dated December 30, 2005, in testimony before the Senate Energy and Natural Resources Committee on May 16, 2006, and in its report to Congress and the Secretary of Energy released in June 2006. The Board held a workshop on these issues in September 2006 and will send its findings and recommendations to OCRWM and Congress and the Secretary in FY 2007.

2.3.1. Review the progress and results of materials testing being conducted to address uncertainties about waste package performance.

- ***Evaluation of 2.3.1: Effective.*** DOE presented information on corrosion testing at the Board's November 8, 2005, meeting. The Board commented in a December 19, 2005, follow-up letter to OCRWM acting director Paul Golan that the Board has continuing concerns about DOE's technical basis for screening out localized corrosion from TSPA-LA. The Board reiterated the concern in its letter report to Congress and the Secretary dated December 30, 2005, in testimony before the Senate Energy and Natural Resources Committee on May 16, 2006, and in its report to Congress and the Secretary of Energy released in June 2006. The Board held a workshop on these issues in September 2006 and will send its findings and recommendations to OCRWM and Congress and the Secretary in FY 2007.

2.3.2. Evaluate DOE's efforts in identifying natural and engineered analogs for corrosion processes.

- ***Evaluation of 2.3.2: Deferred.*** DOE did not undertake such work during the period being evaluated.

2.4.1. Monitor DOE's development of analytical tools for assessing the differences between repository designs.

- ***Evaluation of 2.4.1: Effective.*** DOE assessed differences in repository *surface facility designs* using the Total System Model (TSM). The Board discussed the TSM at its November 8, 2005, meeting and commented on the use and potential of the model in its follow-up letter to OCRWM acting director Paul Golan on December 19, 2005, and its report to Congress and the Secretary dated December 30, 2005. The Board discussed repository surface-facility designs at its meeting on May 9, 2006, and commented on the use of TSM to help guide surface-facility design in its letter to Paul Golan dated June 14, 2006. The Board also discussed these issues in its report to Congress and the Secretary released in June 2006.

2.4.2. Evaluate the accuracy and completeness of the technical bases for repository and waste package designs and the extent to which DOE is using the technical bases for modifying repository and waste package designs.

- ***Evaluation of 2.4.2: Effective.*** As part of its review of DOE's transportation, aging, and disposal (TAD) canister concept, the Board commented on the need to integrate TAD into a waste-management system that effectively balances preclosure safety and long-term repository performance in its December 19, 2005, letter to Paul Golan, acting director of OCRWM. Similar points were made by the Board in its December 30, 2005, letter report to Congress and the Secretary, testimony before the Senate Energy and Natural Resources Committee on May 16, 2006, and in the Board's report to Congress and the Secretary released in June 2006. The focus of the Board's May 9, 2006, meeting was TAD, and in a follow-up letter to Paul Golan, the Board underscored its interest in the performance specification for the TAD canister and its relationship to the postclosure thermal-management strategy.

2.4.3. Evaluate the integration of the subsurface design and layout with thermal management and preclosure facility operations.

- ***Evaluation of 2.4.3: Effective.*** In its December 19, 2005, letter to Paul Golan, acting director of OCRWM, the Board emphasized that the success of the TAD concept depended on the integration of the TAD into a waste-management system that effectively balances preclosure safety and long-term repository performance. Similar points were made by the Board in its December 30, 2005, letter report to Congress and the Secretary, in testimony before the Senate Energy and Natural Resources Committee on May 16, 2006, and in the Board's report to Congress and the Secretary released in June 2006. The focus of the Board's May 9, 2006, meeting was TAD, and in a June 14, 2006, follow-up letter to Paul Golan, the Board underscored its interest in the performance specification for the TAD canister and the relationship of the specification to the postclosure thermal-management strategy.

2.5.1. Assess the integration of scientific studies with engineering designs for the repository and the waste package.

- ***Evaluation of 2.5.1: Effective.*** The Board emphasized the importance of integrating the TAD concept into a waste-management system that effectively balances preclosure safety and long-term repository performance in its December 16, 2005, letter to Paul Golan, acting director of OCRWM. Similar points were made by the Board in its December 30, 2005, letter report to Congress and the Secretary, in testimony before the Senate Energy and Natural Resources Committee on May 16, 2006, and in the Board's report to Congress and the Secretary released in June 2006. The focus of the Board's May 9, 2006, meeting was TAD, and in a follow-up letter to Paul Golan on June 14, 2006, the Board underscored its interest in the TAD canister and its relationship to the postclosure thermal-management strategy.

3. Performance Goals and Evaluation Related to Repository System Performance and Integration

3.1.1. Identify which technical and scientific activities are on the critical path to reconciling uncertainties related to DOE's performance estimates.

- ***Evaluation of 3.1.1: Effective.*** In its December 19, 2005, letter to OCRWM acting director Paul Golan, the Board discussed a number of issues related to uncertainties in repository performance estimates, including in-drift environments following repository closure, thermal conductivity of the repository rock, understanding the source term, and the potential for localized corrosion of waste packages. The issues were reiterated in the Board's December 30, 2005, report to Congress and the Secretary along with the effects of climate change, and retardation and retention of radionuclide colloids in the alluvium. In a letter dated March 6, 2006, the Board commented on the importance of continuing research on the source term exiting the engineered system as a matter of time. These issues were presented in testimony by Dr. John Garrick on May 16, 2006, to the Senate Energy and Natural Resources Committee. A detailed discussion of the issues is included in the Board's Report to Congress and the Secretary released in June 2006.

3.1.2. Determine the strengths and weaknesses of TSPA.

- ***Evaluation of 3.1.2: Effective.*** The Board discussed TSPA at its meeting on November 8, 2005. In its December 19, 2005, letter to Paul Golan, OCRWM acting director, the Board commented on DOE's use of multiple conservatisms in dealing with uncertainties in TSPA and recommended that in addition to its compliance case, DOE develop a realistic assessment of repository performance. The Board also expressed concerns about DOE's technical basis for screening out localized corrosion of the waste packages from TSPA-LA. Similar points were made in the Board's December 30, 2005, letter to Congress and the Secretary. At its February 1, 2006, meeting the Board discussed peak-dose sensitivity analysis. The Board commented in a March 6, 2006, letter to Paul Golan that some methods used by DOE produce results that are inconsistent or unrealistic. The Board recommended a more risk-

informed analysis of repository performance. Chairman Garrick commented on the potential for unrealistic results of TSPA at a hearing before the Senate Energy and Natural Resources Committee on May 16, 2006. The Board discussed these issues at length in its report to Congress and the Secretary released in June 2006.

3.1.3. Evaluate DOE's treatment of seismic and volcanism issues in TSPA.

- ***Evaluation of 3.1.3: Ineffective.*** The Board did not review or comment on these issues in the period covered by the evaluation.

3.2.1. Evaluate DOE's quantification of uncertainties and conservatisms used in TSPA.

Evaluation of 3.2.1: Effective. (See explanation of 3.1.2)

3.2.2. Review new data and updates of TSPA models, and identify models and data that should be updated.

- ***Evaluation of 3.2.2: Effective.*** (See explanation of 3.1.2)

- **Evaluate DOE's efforts to create a transparent and traceable TSPA.**
- *Evaluation of 3.3.1: Effective.* The Board discussed TSPA at its meeting on November 8, 2005. In its December 19, 2005, letter to Paul Golan, acting OCRWM director, the Board commented on DOE's use of multiple conservatisms in dealing with uncertainties in TSPA and recommended that in addition to its compliance case, DOE develop a realistic assessment of repository performance so that decision makers and the public would have important information on how conservative DOE's performance estimates are. Similar points were made in the Board's December 30, 2005, letter to Congress and the Secretary. At its February 1, 2006, meeting the Board discussed peak-dose sensitivity analysis. The Board commented in a March 6, 2006, letter to Paul Golan that some methods used by DOE produce results that are inconsistent or unrealistic. The Board recommended a more risk-informed analysis of repository performance. Chairman Garrick commented on the potentially unrealistic results of TSPA at a hearing before the Senate Energy and Natural Resources Committee on May 16, 2006. The Board discussed these issues at length in its report to Congress and the Secretary released in June 2006.

3.3.2. Evaluate DOE's efforts to develop simplified models of repository performance.

- *Evaluation of 3.3.2: Effective.* (See explanation of 3.3.1)

3.3.3. Evaluate DOE's efforts to identify analogues for performance estimates of the overall repository system.

- *Evaluation of 3.3.3: Effective.* The Board commented on the importance of continuing work at the analog site at Peña Blanca, Mexico in its December 19, 2005, letter to Paul Golan, OCRWM acting director, and in its December 30, 2005, report to Congress and the Secretary.

3.4.1. Evaluate DOE's efforts to analyze the contribution of the different engineered and natural barriers to waste isolation.

- *Evaluation of 3.4.1: Effective.* The Board reviewed DOE activities and commented on various DOE efforts related to the contribution of engineered and natural barriers in most of its letters and reports during FY 2006. The Board was especially interested in DOE work related to the source term exiting the engineered barriers over time and to water flow and radionuclide transport.

3.5.1. Evaluate technical aspects of value engineering and performance-related trade-off studies, including criteria, weighting factors and decision methodologies for such studies and how technical uncertainties are taken into account.

- *Evaluation of 3.5.1: Minimally effective.* The Board discussed the TSM model at its meetings on November 8, 2005, and May 9, 2006. The Board commented on the potential of the model for analyzing systems and tradeoffs in letters to Paul Golan, acting director of OCRWM, on December 19, 2005, and June 14, 2006. The Board also discussed the TSM model in its report to Congress and the Secretary released in June 2006.

3.6.1. Recommend additional measures for strengthening DOE's repository safety case.

- *Evaluation of 3.6.1: Effective.* In its December 19, 2005, letter to Paul Golan, acting OCRWM director, the Board recommended that in addition to its compliance case, DOE develop a realistic assessment of repository performance. The Board also expressed concerns about DOE's technical basis for screening out localized corrosion of the waste packages from TSPA-LA. Similar points were made in the Board's December 30, 2005, letter to Congress and the Secretary. At its February 1, 2006, meeting the Board discussed peak-dose sensitivity analysis. The Board commented in a March 6, 2006, letter to Paul Golan that some methods used by DOE produce results that are inconsistent or unrealistic. The Board recommended a more risk-informed analysis of repository performance. Chairman Garrick commented on the potentially unrealistic results of TSPA at a hearing before the Senate Energy and Natural Resources Committee on May 16, 2006. The Board discussed these issues at length in its report to Congress and the Secretary released in June 2006. The Board held a meeting on this subject in September 2006, and provided its views on these issues in a letter to OCRQM dated December 14, 2006.

3.7.1. Evaluate DOE's efforts to develop a feedback loop among performance-confirmation activities and TSPA models and data.

- *Evaluation of 3.7.1: Effective.* The Board reviewed DOE's latest performance-confirmation plan at a meeting on safety case held in September 2006. The Board communicated its views on performance confirmation in a letter to OCRWM dated December 14, 2006.

3.7.2. Monitor DOE's proposed performance confirmation plans to help ensure that uncertainties identified as part of the site recommendation process are addressed.

- *Evaluation of 3.7.2: Effective.* The Board reviewed DOE's latest performance-confirmation plan at a meeting on safety case held in September 2006. The Board communicated its views on performance confirmation in a letter to OCRWM dated December 14, 2006.

4. Performance Goals and Evaluation Related to the Waste Management System

[**Note: Because of DOE budget constraints and the development of the transportation, aging, and disposal (TAD) canister concept, much of DOE's planning related to transporting spent nuclear fuel and high-level radioactive waste was deferred in FY 2006. Consequently, several of the Board's performance goals related to reviewing DOE transportation-planning activities were likewise deferred.**]

4.1.1. Evaluate the operation of the entire repository facility, including the surface and subsurface components.

- **Evaluation of 4.1.1: Effective.** The Board commented on the potential of the TAD canister concept in a letter to Paul Golan, OCRWM acting director, on December 16, 2005, and in a report to Congress and the Secretary on December 30, 2006. The Board focused on operations, specifically TAD, at its May 9, 2006, meeting. In its follow-up letter to DOE dated June 14, 2006, the Board identified a number of issues important to the successful implementation of TAD, including the timing and availability of TADs for storage at reactor sites, the inclusion of the TAD concept in the TSPA-LA, resolving DOE's policy of accepting only bare fuel for disposal, integrating TAD into a the postclosure thermal-management strategy, and constructing a Nevada rail line to the proposed repository site. Many of these issues also were discussed in the Board's report to Congress and the Secretary released in June 2006.

4.1.2. Monitor the identification of research needs to support improved understanding of the interaction of components of the waste management system.

- **Evaluation of 4.1.2: Effective.** The Board discussed the TSM model at its meetings on November 8, 2005, and May 9, 2006. The Board commented on the potential of the model for analyzing the waste management system in letters to Paul Golan, acting director of OCRWM, on December 19, 2005, and June 14, 2006. The Board also discussed the TSM model in its report to Congress and the Secretary released in June 2006.

4.1.3. Review the technical and scientific basis of DOE's analyses of component interactions under various scenarios, including the degree of integration and redundancy across functional components over time.

- **Evaluation of 4.1.3: Effective.** The Board discussed the TSM model at its meetings on November 8, 2005, and May 9, 2006. The Board commented on the potential of the model for analyzing the waste management system in letters to Paul Golan, acting director of OCRWM, on December 19, 2005, and June 14, 2006. The Board also discussed the TSM model in its report to Congress and the Secretary released in June 2006.

4.1.4. Evaluate the effects of reduced receiving capacity at the repository surface facility on the nationwide transportation system.

- *Evaluation of 4.1.4: Minimally effective.* The Board did not explicitly address this issue in FY 2006. However, the Board discussed the TSM model at its meetings on November 8, 2005, and May 9, 2006. The Board commented on the potential of the model for analyzing the waste management system in letters to Paul Golan, acting director of OCRWM, on December 19, 2005, and June 14, 2006. The Board also discussed the TSM model in its report to Congress and the Secretary released in June 2006.

4.1.5. Review criteria for waste acceptance for storage to ensure that accepted material has been suitably characterized for subsequent disposal.

- *Evaluation of 4.1.5: Deferred.* Citing budget constraints, DOE limited its transportation-planning work in FY 2006.

4.2.1. Monitor DOE's efforts to implement Section 180 (c) of the NWPA.

- *Evaluation of 4.2.1: Deferred.* Citing budget constraints, DOE limited its transportation-planning work in FY 2006.

4.3.1. Monitor DOE's progress in developing and implementing a transportation plan for shipping spent nuclear fuel and high-level radioactive waste to Yucca Mountain.

- *Evaluation of 4.3.1: Deferred.* Citing budget constraints, DOE limited its transportation-planning work in FY 2006.

4.3.2. Review DOE's efforts to develop criteria for transportation mode and routing decisions.

- *Evaluation of 4.3.2: Deferred.* Citing budget constraints, DOE limited its transportation-planning work in FY 2006.

4.3.3. Evaluate logistics capabilities of the transportation system.

- *Evaluation of 4.3.3: Effective.* The Board commented on the potential of the TAD canister concept in a letter to Paul Golan, OCRWM acting director, on December 16, 2005, and in a report to Congress and the Secretary on December 30, 2005. The Board focused on operations, specifically TAD, at its May 9, 2006, meeting. In its follow-up letter to DOE dated June 14, 2006, the Board identified a number of issues important to the successful implementation of TAD, including the timing and availability of TADs for storage at reactor sites, the inclusion of TAD in the TSPA-LA, resolving DOE's policy of accepting only bare fuel for disposal, integrating TAD into a the postclosure thermal-management strategy, and

constructing a Nevada rail line to the proposed repository site. Many of these issues also were discussed in the Board's report to Congress and the Secretary released in June 2006.

4.3.4. Monitor progress in implementing new technologies for improving transportation safety for spent nuclear fuel.

- *Evaluation of 4.3.4: Deferred.* Citing budget constraints, DOE limited its transportation-planning work in FY 2006.

4.3.5. Evaluate DOE's plans for enhancing safety capabilities along transportation corridors, and review DOE's planning and coordination activities (e.g., route selection), accident prevention activities (e.g., improved inspections and enforcement), and emergency response activities.

- *Evaluation of 4.3.4: Effective:* Related issues were included in the Board's comments on the potential of the TAD canister concept in a letter to Paul Golan, OCRWM acting director, on December 16, 2005, and in a report to Congress and the Secretary on December 30, 2006. The Board focused on operations, specifically TAD, at its May 9, 2006, meeting. In its follow-up letter to DOE dated June 14, 2006, the Board identified a number of issues important to the successful implementation of TAD. Similar issues also were discussed in the Board's report to Congress and the Secretary released in June 2006.

SUPPLEMENTARY INFORMATION ON THE U.S. NUCLEAR WASTE TECHNICAL REVIEW BOARD

The U.S. Nuclear Waste Technical Review Board was established on December 22, 1987, in the Nuclear Waste Policy Amendments Act (NWPAA) as an independent agency in the executive branch of the federal government. The Board is charged with evaluating the technical and scientific validity of activities undertaken by the Secretary of Energy, including the following:

- site characterization
- activities related to packaging and transporting high-level radioactive waste and spent nuclear fuel.

The Board was given broad latitude to review activities undertaken by the Secretary of Energy in implementing the Nuclear Waste Policy Act. However, the Board was not given authority to require DOE to implement Board recommendations.*

Board Members

The NWPAA authorized a Board of 11 members who serve on a part-time basis; are eminent in a field of science or engineering, including environmental sciences; and are selected solely on the basis of distinguished professional service. The law stipulates that the Board shall represent a broad range of scientific and engineering disciplines relevant to nuclear waste management. Board members are appointed by the President from a list of candidates recommended by the National Academy of Sciences. To prevent gaps in the Board's comprehensive technical review, Board members whose terms have expired continue serving until they are reappointed or their replacements assume office. The first members were appointed to the Board on January 18, 1989. Current members were appointed by President George W. Bush.

The names and affiliations of the current 11 Board members are listed below.

- **B. John Garrick, Ph.D., P.E.**, is chairman of the Board. A founder of PLG, Inc., he retired from the firm in 1997 and is a private consultant. His areas of expertise include probabilistic risk assessment and application of the risk sciences to technology-based industries.

* Taken from *Legislative History of the Nuclear Waste Policy Amendments Act of 1987, February 26, 1998.*

- **Mark D. Abkowitz, Ph.D.**, is professor of civil and environmental engineering and director of the Vanderbilt Center for Environmental Management studies at Vanderbilt University. His areas of expertise include transportation safety and security, systems analysis, all-hazards risk management, and applications of advanced information technologies.
- **William Howard Arnold, Ph.D., P.E.**, a private consultant, retired from Louisiana Energy Services in 1996. He holds a doctorate in experimental physics and has special expertise in nuclear project management, organization, and operations.
- **Thure E. Cerling, Ph.D.**, is Distinguished Professor of Geology and Geophysics and professor of biology at the University of Utah. His areas of expertise include terrestrial geochemistry and geochemistry processes.
- **David J. Duquette, Ph.D.**, is department head and professor of materials engineering at Rensselaer Polytechnic Institute. His areas of expertise include the physical, chemical, and mechanical properties of metals and alloys.
- **George M. Hornberger, Ph.D.**, is Ernest H. Ern Professor of Environmental Sciences in the Department of Environmental Sciences at the University of Virginia. His areas of expertise include catchment hydrology and hydrochemistry and transport of colloids in geologic media.
- **Andrew C. Kadak, Ph.D.**, is Professor of the Practice in the Nuclear Science and Engineering Department at the Massachusetts Institute of Technology. His areas of expertise include nuclear engineering and the development of advanced reactors.
- **Ronald M. Latanision, Ph.D.**, is emeritus professor of materials science and engineering at the Massachusetts Institute of Technology and a principal in Exponent, a science and engineering firm. His areas of expertise include materials processing and corrosion of metals and other materials in aqueous environments.
- **Ali Mosleh, Ph. D.**, is Nicole J. Kim Professor of Engineering, director of the Reliability Engineering Program, and director of the Center for Risk and Reliability at the University of Maryland. His areas of expertise include methods for probabilistic risk analysis and reliability of complex systems.
- **William M. Murphy, Ph. D.**, is associate professor in the Department of Geological and Environmental Sciences at California State University, Chico. His research focuses on geochemistry, including the interactions of nuclear wastes and geologic media.
- **Henry Petroski, Ph.D., P.E.**, is Aleksandar S. Vesic Professor of Civil Engineering and professor of history at Duke University. His areas of expertise include the interrelationship between success and failure in engineering design. He also has a strong interest in invention and in the history of evolution of technology.

Board Staff

The NWPAA limits the Board's professional staff to 10 positions. An additional 5 full-time employees provide administrative support to Board members and the professional staff. Because of the comprehensive nature of the program, the diversity of Board member experience and expertise, and the part-time availability of Board members, the small, highly qualified staff is employed to its full capacity in supporting the Board's review of DOE program. The Board's offices are in Arlington, Virginia.

Board Reporting Requirements

As required under the NWPAA, the Board reports to the U.S. Congress and the Secretary of Energy at least two times each year. The reports include Board recommendations related to improving the technical and scientific validity of activities undertaken by the Secretary of Energy under the civilian radioactive waste management program. DOE's written responses to Board recommendations are published in the Board's annual summary reports.

Board Activities

The Board and its panels sponsor meetings and technical exchanges with program participants and interested parties, including representatives of DOE and its contractors, the U.S. Nuclear Regulatory Commission, the U.S. Environmental Protection Agency, the U.S. Geological Survey, the U.S. Department of Transportation, the State of Nevada, affected units of local governments, Native American tribes, nuclear utilities, environmental groups, state utility regulators, and members of the public. Board members and staff attend relevant technical conferences, meetings, symposia, workshops, participate in field trips, and occasionally visit foreign programs to gain insights from the experience of other countries' repository development efforts.

Board and panel meetings are open to the public and announced in the *Federal Register* four to six weeks before each meeting. To facilitate access for program participants and the public, the Board holds the majority of its meetings in the State of Nevada, and time is set aside for public comment at each meeting. Transcripts of Board and panel meetings and all Board reports, correspondence, and congressional testimony are available to the public via telephone or written request or from the Board's Web site: www.nwtrb.gov.
